

**Supplementary table 4.** The top 10 most frequently indexed keywords in the five categories of general terms, imaging terms, treatment terms, disease terms and types of study.

<b>General Terms:</b>	
• humans	17515
• male	10623
• female	10247
• adult	8319
• middle aged	6885
• aged	3543
• adolescent	2838
• young adult	2110
• child	2038
• aged 80 and over	1169
<b>Imaging/diagnostic Terms:</b>	
• fluorescein angiography	2123
• tomography optical coherence	1560
• magnetic resonance imaging	555
• fluorescein angiography/methods	504
• tomography x-ray computed	388
• indocyanine green	358
• ultrasonography	304
• biopsy	254
• coloring agents	248
• biomarkers/blood	213
<b>Treatment Terms:</b>	
• glucocorticoids/therapeutic use	1082
• drug therapy combination	769
• infliximab	451
• anti-inflammatory agents	412
• vitrectomy	319
• anti-bacterial agents	259
• adalimumab	208
• prednisone/therapeutic use	53
• lens implantation intraocular	39
• phacoemulsification	33
<b>Disease Terms:</b>	
• behcet's	1804
• uveitis	1215
• acute disease	672
• chronic disease	458
• disease progression	393
• retina/pathology	289
• choroid/pathology	288
• inflammation	285
• choroid diseases/diagnosis	277
• Behcet syndrome	254
<b>Types of Study:</b>	
• Retrospective studies	3156

● prospective studies	1071
● follow-up studies	1757
● case-control studies	937
● cross-sectional studies	475
● cohort studies	311
● double-blind method	207
● surveys and questionnaires	197
● risk assessment	159
● clinical trials as topic	109

*Note: The five main keyword categories were selected by authors. Based on the themes of the terms identified within each category, the top ten terminologies are selected. The terms within each category appear in the order of highest to lowest occurrence.*
