Patients were recruited in the clinic and purpose of research explained to them.

On admission, patients filled the state trait anxiety inventory (1\textsuperscript{st} time) and also chose their preferred music.

In the pre-op room the state trait anxiety inventory was filled (2\textsuperscript{nd} time) and the preferred music was played with the use of earphones.

Patients wheeled into the theatre, surgery commenced and surgeon was blinded to the group of the subject.

Music was played for 5mins. The state trait anxiety inventory was filled again (3\textsuperscript{rd} time).
